

Education Identity & Access Management (EDIAM) Security Go Live Chart Instructions

Date: September 5, 2019

To: School District Superintendents and Identified Officials with Authority (IOwAs)

The EDIAM Security Go Live Chart is the release schedule of when each secure web site system will be converted from MDE Identity Management System (MIDMS) Security to EDIAM Security. Each system will be converted to EDIAM on one of these four dates: September 6, September 20, October 18 or November 15. The chart will be updated if and when implementation dates change.

How to Read the EDIAM Security Go Live Chart

There are three dates associated with each system:

1. **IOWA Can Authorize Access Starting (EDIAM Config):** This is the date when the Identified Official with Authority (IOWA) at the district can begin granting user access to this system in production. This does NOT mean that the system itself is converted to EDIAM in production yet. We want to provide the IOWA with a few days to authorize user access before system conversion to EDIAM to minimize business interruption when the system conversion happens. For brand new systems, this date is typically the same as the EDIAM Go Live date.
2. **Use MIDMS for Access Until:** All users should continue to use their current MIDMS user account to access this system through this date. This date is typically the day before the Go Live date. New systems which are being developed using EDIAM security will not have a date for using MIDMS for access.
3. **Use EDIAM for Access Starting (EDIAM Go Live):** This is the date when the system is converted to EDIAM in Production. As of this date, all users must have an EDIAM user account and have system access granted to them by the IOWA for their organization to access this system. Users without access after the Go Live date need to contact their organization's IOWA to gain access – MDE cannot grant access.

Use the Data Submissions link to access your applications, e.g., MARSS WES, or Secure Reports link rather than bookmarking individual applications or reports and you will be presented with the appropriate log-in screen – MIDMS or EDIAM. The two will look vastly different so you will know to use your EDIAM account and password rather than your MIDMS account and password. The EDIAM has the branded logo and blue and green colors. You can also go to your account information in [MIDMS](#) and [EDIAM](#) (two different places

which are linked in the spreadsheet) to see which systems you have access to on any given day – this will be helpful through the transition period to identify which access still needs to be granted under EDIAM. Contact your organization’s IOwA to request access.
